Sprint D - Enterprise Readiness · Mastery 92%

Focus

Enterprise pilot dry-run: measure the pilot rigorously and define its success criteria in advance.

What to build / complete

- Pre-agreed pilot success criteria and a measurement plan
- A live pilot analytics view for both sides
- An honest pilot readout with recommendations

Execution — work through in order

Phase 3 gives you a goal and a bar, not a recipe. These stages are the discipline; the design decisions are yours to make and defend.

Stage A — Understand & set the bar

1. Re-read the Expected Output and the scoring parameters so you build to the bar, not past it.
2. Confirm every prerequisite and upstream input is actually in your hands, not merely promised.
3. Restate, in one sentence, what 'good' means here: Whether the pilot succeeded is decided by pre-agreed numbers, not by whoever argues best afterwards.

Stage B — Build: Pre-agreed pilot success criteria and a measurement plan

1. Define the metric, its source & the decision

Define precisely what “Pre-agreed pilot success criteria and a measurement plan” measures, which raw events it depends on, and which decision it changes. No decision, no metric.

2. Build the query/model on real data

Build the query/model on real production data — sampled if you must, but never synthetic.

3. Validate: reconcile, sanity-check, quantify uncertainty

Reconcile against a source system, sanity-check the magnitude, and state the uncertainty honestly.

4. Tie every number to an action & defend it

For every number, be ready to say where it came from and what action it triggers. Undefendable numbers do not ship.

Stage C — Build: A live pilot analytics view for both sides

1. Define the metric, its source & the decision

Define precisely what “A live pilot analytics view for both sides” measures, which raw events it depends on, and which decision it changes. No decision, no metric.

2. Build the query/model on real data

Build the query/model on real production data — sampled if you must, but never synthetic.

3. Validate: reconcile, sanity-check, quantify uncertainty

Reconcile against a source system, sanity-check the magnitude, and state the uncertainty honestly.

4. Tie every number to an action & defend it

For every number, be ready to say where it came from and what action it triggers. Undefendable numbers do not ship.

Stage D — Build: An honest pilot readout with recommendations

1. Define the metric, its source & the decision

Define precisely what “An honest pilot readout with recommendations” measures, which raw events it depends on, and which decision it changes. No decision, no metric.

2. Build the query/model on real data

Build the query/model on real production data — sampled if you must, but never synthetic.

3. Validate: reconcile, sanity-check, quantify uncertainty

Reconcile against a source system, sanity-check the magnitude, and state the uncertainty honestly.

4. Tie every number to an action & defend it

For every number, be ready to say where it came from and what action it triggers. Undefendable numbers do not ship.

Stage E — Integrate, verify & make demoable

1. Wire your work into the end-to-end flow and run the whole journey once, start to finish.
2. Present the pre-agreed criteria and the live pilot measurement against them.
3. Break it on purpose: force the failure path and confirm it degrades the way you designed.
4. Prepare a live demo on real data. Not slides, not screenshots, not 'it works on my machine'.

Done when (demoable by end of task)

- “Pre-agreed pilot success criteria and a measurement plan” is complete, real, and demoable end-to-end.
- “A live pilot analytics view for both sides” is complete, real, and demoable end-to-end.
- “An honest pilot readout with recommendations” is complete, real, and demoable end-to-end.
- Good looks like: Whether the pilot succeeded is decided by pre-agreed numbers, not by whoever argues best afterwards.

Worry if any of these are true

- Success criteria defined after seeing results.
- Over-claiming from an underpowered pilot.
- Calling an experiment early because it looked good on day two.

Hand-off

- Pilot readout to leadership. Make sure the next person can pick it up without you.
